

Introduction

The SAW Booster Series™ module **slideLinks** extends the Open Text Content Server component of the ECM Suite by enabling the professional administration of Microsoft Office PowerPoint presentations and simplifying the way of working with.

Highlights

Album view

The album view provides an overview of the presentation by displaying each single slide in a **thumbnail mode**.

Album view

Preview

Preview

A click on the thumbnail opens the **preview mode** to a screen-filling display of the slide.

By using thumbnail and preview mode, slides and presentations can be found more easily. Furthermore only the required presentation will be opened. This helps to save network resources and enables faster access to the requested file.

Functionalities

For the slide management a number of functionalities can be applied. Via „**drag & drop**“ functionality slides can be sorted and reorganized very intuitively.

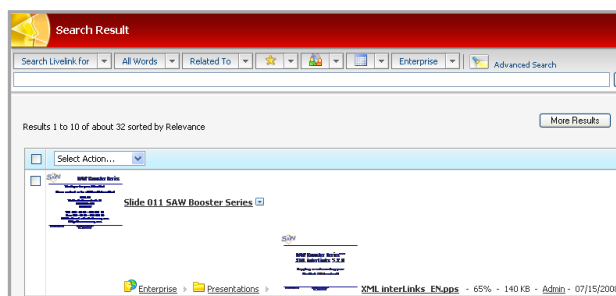

If a new presentation out of existing slides has to be created, the slide basket can be used as temporary storage to collect slides from different presentations.

For using predefined layouts, the **slide master** from other presentations can be copied and assigned to a new presentation.

Search Result

slideLinks is fully integrated into the Content Server ECM environment and uses the entire functionality of the **full-text search engine**.

Search Result

In the **search result** slide texts are indexed as well as slide notes.

Each single slide is displayed as a thumbnail.

Slides and presentations can be found easily by these search options.

Benefit

slideLinks enables users to view a complete stock of PowerPoint presentations and to make these available to other parties in consolidated form via Internet/Intranet.

This creates transparency over the existing presentation material and saves time and money thereby.

Functionalities

- Support of PowerPoint presentations in Microsoft Office 2007 formats (.ppsx, .pps, .pptx, .ppt)
- Thumbnail view and preview of each PowerPoint slide
- 'Drag & Drop' functionality to reorganize presentations
- 'Slide Basket' enables the creation of a new presentation by collecting slides from multiple presentations.
- 'Slide Show' functionality to present PowerPoint files.
- Different sort options within a presentation
- Full-text search of every information stored within the presentation slide (slide notes, slide texts)
- Efficient multi-upload of presentations by Open Text Explorer Professional and Open Text WebDAV Drag & Drop
- Configuration on the Open Text Content Server Admin page

Information

For additional information about **slideLinks** please go to <http://www.sawag.com>

Requirements

Open Text Content Server Version 9.7.1,
installed on Windows XP or Windows NT
with Oracle 10x or Microsoft SQL Server 8 database,
Microsoft Office 2007
Clients: Internet Explorer 5.5 or higher.
